

# Project Spotlight

Voca Road  
Atoka County

Voca Road begins at US 69 Highway, just North of Caney and extends to the West and has been a gravel and chip seal surfaced road for years. Knowing that this would likely be the only project this section would see for many more years to come, the engineers at Southeast Circuit District #3 engineers decided to go the long-lasting route and design a concrete pavement.

In order to cut down on cost, the existing roadbed was processed in place and compacted to form the base for the new concrete surfacing. Next the 6" concrete pavement surfacing was placed the full 24 foot width

for the length of the project and was completed ahead of schedule.

After completion, the residents that lived along Voca Road were extremely impressed with the smoothness of the road. Many of them stated that this was the best improvement they had seen on this stretch in over fifty years.

With the level of traffic Voca Road is expected to receive in the future, they should not expect to need any further improvement for the next fifty years or more with this concrete pavement.

Project Name: Voca Road, Atoka County  
Design: 6" Plain Jointed Concrete Pavement  
Year Constructed: 2016  
Design Engineer: Southeast Circuit Engineer #3  
Contractor: Duit Construction
